

Project Design Phase-II

Technology Stack (Architecture & Stack)

Date	18 October 2022
Team ID	PNT2022TMID24224
Project Name	Signs with Smart Connectivity for Better Road Safety
Maximum Marks	4 Marks

Application

Cloud Services

Middleware

Python Code
(random data)

Networking

Openweathermap

Sensing

GUIDELINES:

- To replace the static signboards, smart connected sign boards are used.
- These smart connected sign boards get the speed limitations from a web app using weather API and update automatically.
- Based on the weather changes the speed may increase or decrease.
- Based on the traffic and fatal situations the diversion signs are displayed.
- Guide(Schools), Warning and Service(Hospitals, Restaurant) signs are also displayed accordingly.
- If there is rainfall then the roads will be slippery and the speed limit would be decreased.
- There is a web app through which you can enter the data of the road diversions, accident prone areas and the information sign boards can be entered through web app. This data is retrieved and displayed on the sign boards accordingly.
- Different modes of operations can be selected with the help of buttons.

S.No	Component	Description	Technology
1.	User Interface	User can able to access the feature through the digital sign boards placed at fixed distance	IoT,Python
2.	Application Logic-2	IBM Watson is a data analytics processor that uses natural language processing, for processing vast stores of data	IBM Watson
3.	Application Logic-3	A flow based programming tool for wiring together hardware devices , api , online services	IBM Node red
4.	Cloud Database	IBM Cloud provides solutions that enable higher levels of compliance, security, and management, with proven architecture patterns and methods for rapid delivery for	IBM Cloud

		running mission-critical workloads	
5.	External API-1	The OpenWeatherMap API currently provides a wide variety of weather data including current weather, forecasts, history record	Open weather API

Table-2: Application Characteristics			
S.No	Characteristics	Description	Technology
1.	Security Implementations	Has a strong security to the database that cant be accessed without a particular credentials	cyber resiliency strategy
2.	Scalable Architecture	The architecture is connected with the help of Internet .The range of operation can be increased by increasing bandwidth	internet.
3.	Availability	Available anytime and everywhere 24/7 as long as the user is signed into the network.	IBM Cloud
4.	Performance	Supports a large number of users to access the technology simultaneously.	IBM cloud
